NH Global Design Incorporated:

On July 1st, 1995, tool and die makers Doug and Mark Hind created NH Global Design with a vision for manufacturing custom quality equipment that would surpass customer expectations. Beginning with just three dedicated people, two mechanical personnel and one

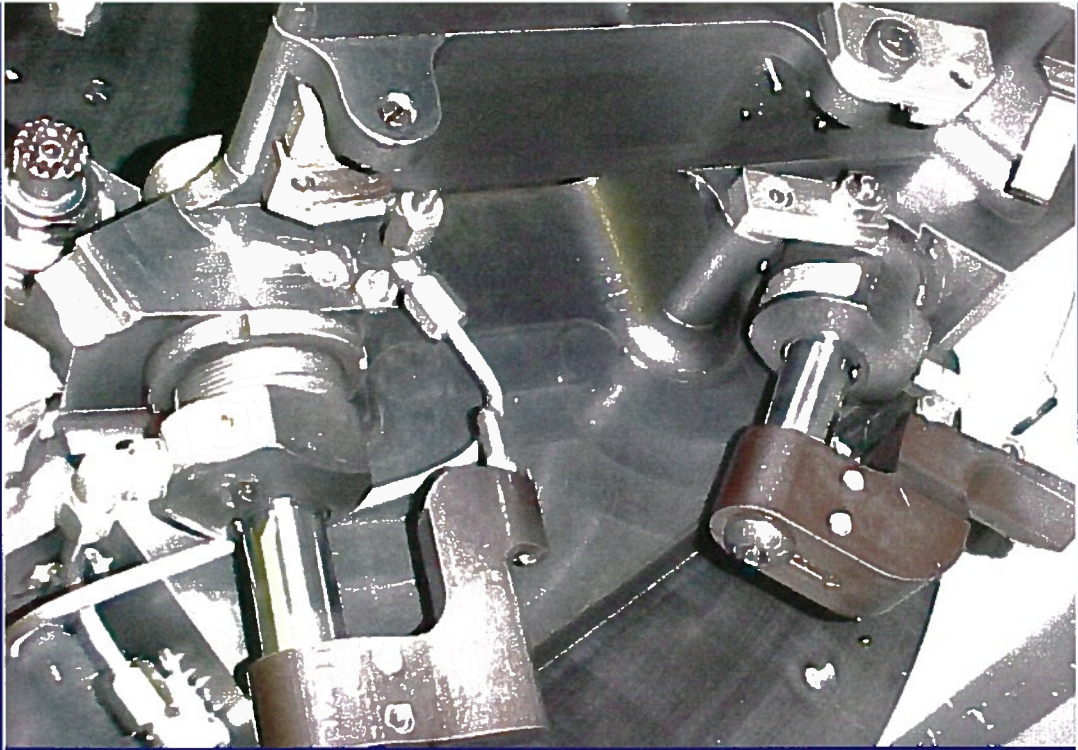

designer, the company has conceptualized and built many custom applications, including operator stations, assembly-automating solutions, CNC machining fixtures, and robotics handling.

Today, the company has increased its team with over twenty qualified experts to design and build a broad range of projects within its two facilities: a 9,000 square foot design and manufacturing site, and a 7000 square foot assembly operation. As a result, NH Global Design can accommodate a client's needs completely in-house with precision-built automation with CNC and CMM capabilities utilizing the latest technology in the industry.

From concept to completion and redesign, manufacturing turnkey installations or fully integrated systems, NH Global Design has built a loyal client base made up of entirely repeat customers. This type of operation has promoted NH Global Design as a recognized leader in the industry, unmatched in performance, diversity and client satisfaction.

The Design, Build and Implementation Process:

The company's team of mechanical designers, manufacturing, and electrical design departments work closely to integrate and monitor the entire process. The design is first created from scratch by NH Global Design's team, or supplied by the client with a print that is imported into state-of-the-art 3D software. The advanced software permits a greater insight to the design, minimizes machining and fabrication efforts, and allows parts to be assembled with fewer revisions.

At NH Global Design, the client is treated with the utmost respect and encouraged to visit at every stage of the project. In addition, the customer received periodic detailed design views and the required assembly plans. Once the design is finalized, the necessary tooling is precision-built with only the ideal materials selected to ensure maximum durability. In situations where the finished product is to be implemented off-site, the team at NH Global Design works closely with the client's staff and existing processes to ensure the product is fully utilized and that parts designed are common to the customer's equipment.

NH Global Design's Guarantee:

NH Global Design is founded on a commitment to quality, competitive pricing, on-time delivery, and overall client satisfaction. As such, NH Global Design supplies full customer support even after delivery, including the proper training, technical manuals, and PSR approval. In addition, all product built by NH Global Design comes with a one year guarantee from production run, while purchased products carry their original manufacturer's warranty.
